

CONCEALED HYGIENIC RADIATORS

The best radiators for healthcare facilities

The currently existing designs of hygienic radiators are characterised by the fact that they can be cleaned more easily, and in this way they do not become a natural place where dust can be deposited. The cleaning of protruding heating appliances which hang on walls is a necessary, albeit rather cumbersome task.

And what if there was a radiator which does not require cleaning? The radiator which does not disperse dust and other allergens or prevents the formation of moulds on walls and the drying of air? The radiator in the case of which there is no necessity to remove air year to year, quiet, extremely comfortable and really hygienic?

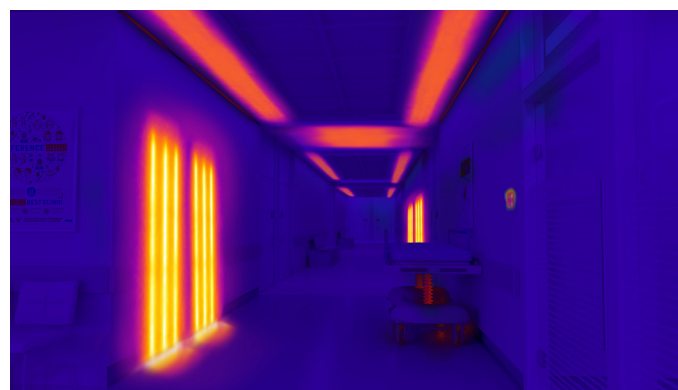

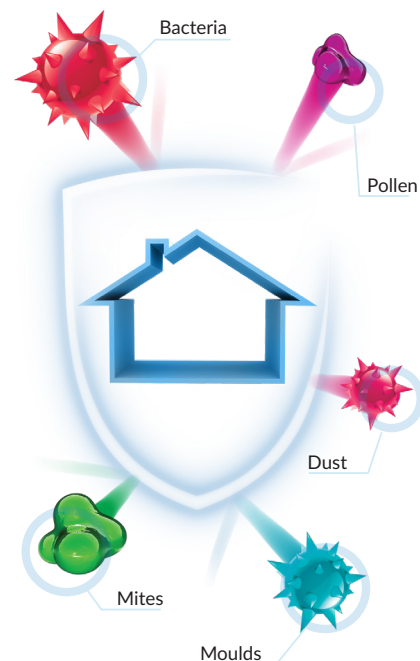

3THERMO is a manufacturer of the modern Concealed Radiator System. Not only is such heating extremely hygienic, but also it is the healthiest form of heating. Wall heating as the only type of heating does not dehumidify air, but rather additionally humidifies it, eliminating unwanted moisture from walls. The healthy dry masonry and air of optimal humidity ensure the excellent microclimate for all rooms intended for permanent human habitation. The wall heating is the ideal form of heating for allergy sufferers, but also for use in all treatment rooms, where hygiene and sterility are absolutely important.

*"As far as thermal physiology is concerned, **wall heating** is superior to any other type of heating."*

Prof. Witold Kamler

*Sanitary engineer, professor at the Warsaw Technical University,
author of many publications related to heating*

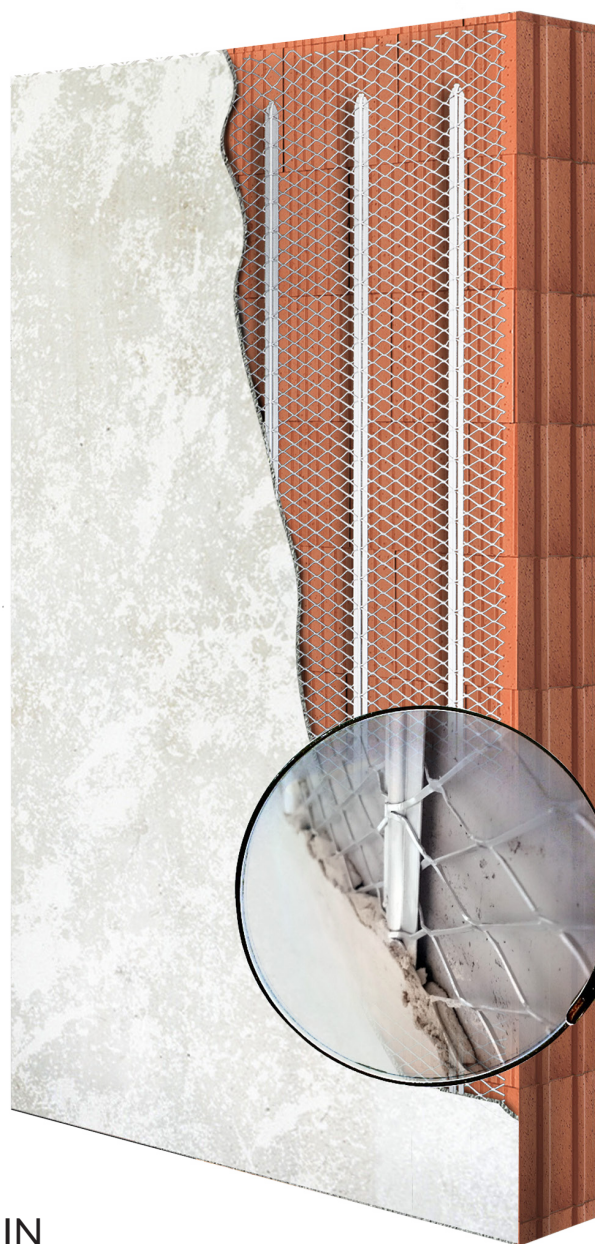

The present structural form of wall heating which 3THERMO has implemented, is a very practical and energy-efficient solution. The System can also be installed very easily in active facilities as a replacement of the currently hanging radiators. Through a simple modernisation, we can replace the old energy-consuming heating system with a modern electronically controlled surface system characterised by the low-temperature heat redistribution. It has never really been so simple.

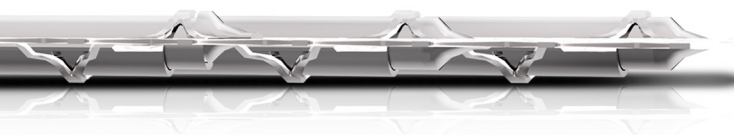

WALL HEATING OF THE NEW GENERATION CONCEALED RADIATORS

NO WATER
AND CURRENT IN THE WALL

- SAFE
- HYGIENIC
- ECONOMIC
- INVISIBLE
- SUPPLIED FROM THE CENTRAL
HEATING SYSTEM

IMPROVE THE ENERGY EFFICIENCY
OF YOUR BUILDING WITH AN ULTRA-THIN
CONCEALED RADIATOR
